

Case Title	MAN 2-Stroke Engine Voyage Overhaul
Machinery Type	MAN B&W 6G50ME-C9.5
Achievement Date(s)	February 2020

Project Details

KAIMS was assigned the overhauling for a series of 2-stroke MGEs equipped on a client's LPG Carrier; same client operates a fleet of LNG Carriers which we perform their DF engine management. This task was a 6-day minor overhaul attendance during the vessel's voyage, the engine had not completed the running-hour overhaul requirement interval, however, the shipowner wanted to preventively perform the repair scope. Such scope consisted of, but never limited to:

- ✓ Cylinder liner removal and overhaul of components wherever required.
- ✓ Visual inspection of the MGE condition and presentation of suggestions.

As always, measurements and detailed reporting was provided to the ship owners and the run-in testing of the MGE was completed yielding successful results.
