

MAN 51/60DF Engine overhauling – Cylinder Head O/H while on board?

After a solid performance of our engineers working on the MAN 51/60DF Engines, we were invited again to perform the Major overhauling scope on a MAN 9L51/60DF Engine during its Atlantic ocean crossing.

This attendance was a great milestone for us once again as we took on the overhauling of the Cylinder Heads (via Chris Marine) while on board. Although this is dependent on the running hours of the engine, it's certainly a great cost-time-transportation saver for our customers.

Among the Cylinder Head overhauling, we conducted tasks such as Cylinder Liner Honing – Bearing Renewal – Pump(s) refurbishment – Piston Maintenance and many more.
